WL70 WiFi Antenna

The new, budget WL70 wi-fi antenna brings reliable wi-fi connectivity to an on board laptop PC or MAC.

More and more boaters want access to the internet afloat. Marinas and ports as well as a large number of cafes, hotels, restaurants and service providers offer wi-fi connectivity but you may just miss that vital connection if you're moored or anchored away from the dock – especially if you're below decks about to enjoy a movie or catch up on email. The WL70 can offer connections up to about ½ mile depending upon conditions.

It has a very high performance 15dBm antenna to suck in the weakest of signals and the internal low noise, high sensitivity modem connects to the PC via simple plug 'n play USB interface. It fits a standard 1" mount (not supplied) so can be permanently mounted or even taken out into the cockpit when moored and temporarily installed.

Welcome to the new internet connected boat!

"Get reliable wi-fi internet on board with the WL70"

"Ultra rugged GRP and stainless steel construction for permanent external mounting"

"Works with PC, MAC and most Linux distributions too"

"Fits standard 1 inch mounts"

"Easy USB connection for PC, MAC and Linux connectivity – you can use your PC to share the connection with other mobile devices too!"

WL70 WiFi Antenna Features

"Fits standard 1" mounting brackets, mounts and poles for easy deck, mast or rail installation"

NB! Base not supplied Choose from a wide selection of 3rd party 1" mounts

- Improve wi-fi reception on board with ranges up to 1km
- Ultra rugged GRP and stainless steel construction – designed for permanent marine installation
