PARIS BOAT SHOW 2015

The amazing Salon Nautic in Paris runs from 4-13th December and Digital Yacht will have our best ever display of products and a host of offers and surprises for the show. This year is especially important given the recent events in Paris and we're delighted to whole heartedly support this stunning show.

It also celebrates the first year anniversary of Digital Yacht France, headed up by Nic Guerin. On 8th December, from 6-8pm, we'll enjoy the Soiree des Equipementiers. We've FREE tickets for entry to the show all day and some special uniquely English (or maybe Scottish!) aperitifs to set the scene. If you'd like a ticket, give us a call on + 33 1 70 70 92 50

So what do we bring to the party at the World's gastronomic capital? It can't be wine so it has to be whisky and a few select malts from the Isle of Jura should liven up the soiree nicely.

Above all we'll have some amazing offers and deals on AIS, wireless navigation, GPS, marine PCs and WiFi access products throughout the show and we'll be showing our new Aqua Compact Pro PC - the perfect partner for Maxsea and Furuno radar-chart systems. We look forward to welcoming you there (4th-13th December 2015)

AIT3000 CLASS B AIS TRANSPONDER

At a glance:

- Class B AIS transponder with built in VHF antenna splitter
- NMEA, USB and WiFi interfaces for easy connectivity
- Supplied with GPS antenna
- FM radio outlet too
- Update to next generation navigation with iPad and tablet connectivity

It's just over a year since we introduced the AIT3000 Nucleus AIS transponder. Nucleus is an appropriate name give the technology that's incorporated. The AIT3000 features a patented ZeroLoss VHF antenna splitter allowing it to share the main VHF antenna making installation a breeze. It's also designed to become the hub of inter-connectivity with NMEA 0183, NMEA 2000, USB and WiFi interfaces allowing it to connect to just about any on board device from plotter to PC, iPad or tablet. It even has an outlet for an FM stereo so you can enjoy some vibes while sailing - or catch up on the latest weather forecast!

iPhone, iPad, Tablet & PC NAVIGATION SOLUTIONS

EASY NAVIGATION SOLUTIONS TO USE YOUR IPAD, TABLET, PC OR MAC AFLOAT

A core part of Digital Yacht technology is what we call "wireless navigation" - integrating consumer devices like iPads, PCs and tablets into the boat's navigation system. These powerful and affordable devices can make a step change in navigation functionality with a wide variety of apps from charting to instrument displays, anchor alarms to advanced performance sailing solutions.

Digital Yacht make simple to install NMEA to WiFi products allowing you to get raw boat data to your iPad or tablet. Then choose your app and you've just upgraded to next generation navigation. Check out our WLN10 and NavLink products or click on the download links below.

Turning your Windows laptop into a full function, sophisticated chart plotter is easy with our SmarterTrack Express pack. It comes with a USB powered DualNav GPS and GLONASS sensor and easy to use SmarterTrack PC Navigation software. What's more, you can utilise the Navionics charts that you may use with a chart plotter on SmarterTrack too.

As the system is completely portable, it's ideal for use by charter skippers who can effectively turn their laptop into a large screen format plotter at a fraction of the cost of a dedicated device. It's also popular with commercial users, superyacht captains and delivery crew as well as boaters looking for a good value, big screen navigation solution.

**SMARTERTRACK PC
NAVIGATION SOFTWARE NOW
AVAILABLE WITH THE DUALNAV GPS150**

NAVLINK FOR NMEA 2000 SYSTEMS

Modern marine instruments and plotters use NMEA2000 to interconnect. Adding next generation wireless navigation to these systems is easy with NavLink. Just plug into the NMEA 2000 backbone and stream data right to your mobile device. It's even self powered from the NMEA 2000 backbone.

NavLink+ adds USB connectivity for PC and MAC based systems so your N2K navigation system can integrate with both wireless consumer devices and PC systems like our SmarterTrack navigation package. Next generation navigation has never been so affordable.

SIGNAL K, iKOMMUNICATE and a KICKSTARTER CAMPAIGN - LAST FEW DAYS REMAINING BUT 500% SUBSCRIBED. THANK YOU!

NMEA interfacing standards have been with us for a while and while reliable and well proven, they don't allow easy connectivity with the latest generation of devices and apps - or the Internet of Things.

So a group of open source developers have been working hard on the Signal K platform for the past few years and it looks very exciting. Signal K aims to be the next generation solution for marine data exchange. It is intended to be used not only for communication between instruments and sensors on board a single vessel, but also to allow for sharing of data between multiple boats, aids to navigation, ports, marinas or any marine asset. It is designed to be easily implemented by web and mobile applications and to connect boats and ships to the Internet of Things Afloat.

Like any new data standard, it takes a critical mass of early adopters to make a step change and Digital Yacht's Kickstarter campaign has allowed us to validate the market for Signal K connectivity utilising our new iKommunicate NMEA to Signal K gateway.

"Kickstarter isn't just about the funding element of a new product but also about the valuable direct relationship we can establish with early adopters who can provide so much information for applications. We see the co-existence of NMEA and Signal K being the perfect technology match and iKommunicate acts as an easy to install gateway" commented Nick Heyes, CEO of Digital Yacht.

The project is now 5x subscribed which shows boaters do want better on board interfacing. You have until 15th December to join up too and take advantage of a special price and your chance to be part of the next generation of marine interfacing. Thanks for backing.

NEW FOR 2016! AQUA COMPACT PRO PC

Our new Aqua Compact Pro brings affordable, powerful computing to your boat so you can take advantage of the latest applications for charting, radar, 3D bathymetry and monitoring - plus, of course, all the normal useful PC applications like e-mail, web browsing, office and entertainment.

Just 11 x 11.5cm

Measuring just over 4" square, it packs in a powerful Intel i3 processor with stunning HD5500 graphics, a super fast and reliable 120GB hard drive and 8GB RAM. There's also built in connectivity for BlueTooth and WiFi and dual monitor support.

Importantly, its been tested with Maxsea/Nobeltec Time Zero software which has a demanding hardware requirement for radar and charting overlays. It takes advantage of the latest Windows 10 operating system which is pre installed although Windows 7/8.1 are available as a no-cost option.

Despite its powerful specification, it's powered direct from 10-18V DC and consumes around 20W so its friendly on your batteries too!

The new Aqua Compact Pro will be available in January and will be priced at £795/€1135/US\$1295 excluding VAT if applicable. We will also be offering a pre-install service of Furuno software for dealers making it a great, easy to install solution for Furuno TZT systems.

MERRY CHRISTMAS! AND FACTORY OPENING TIMES

The whole team at Digital Yacht wishes everyone a very happy, safe and enjoyable Christmas and best wishes for the New Year. We hope you like our e-card!

The Digital Yacht factory will close for Christmas on 24th December and re-open on 4th January 2016. During this period there will be no shipments.

New price lists for 2016 will be published in shortly. Check on line at our newsfeed www.digitalyacht.net for the latest updates
