AIS Systems

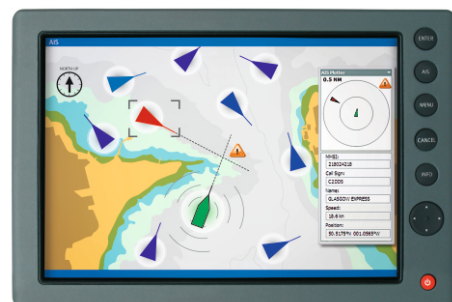

Wake up your chart plotter with Digital Yacht AIS Receivers & Class A/B Transponders for every application

Digital Yacht have the most extensive range of AIS products from any manufacturer with AIS receivers and Class A/B transponders available together with a full line up of accessories such as alarms, antennas and splitters.

With AIS you'll bring your plotter and navigation systems to life with a dynamic overlay of AIS targets and a clear indication of their identity and heading. The system provides a step change in navigational situation awareness, security and a great basis for social boating to identify your friends and fellow boaters. Use our SmarterTrack PC navigation software for great real time navigation displays or the NavLink range of iOS apps.

All our products utilise the most sophisticated dual channel technology for unrivalled target acquisition capability and with HF AIS satellite tracking embedded software on the Class B products, they are future proofed for advanced ocean satellite tracking. Choose the ultimate AIT3000 for wireless, NMEA, NMEA 2000 and USB connectivity with a built in ZeroLoss splitter for the fastest, easiest and best way to upgrade your navigation with Digital Yacht AIS.

See also the AIS LifeGuard AIS SART alarm - a valuable accessory for use with AIS PLBs and SARTS. Ask our AIS experts about the best antennas or accessory for your installation and visit our daily newsfeed at www.digitalyacht.net for useful tech tips.

Watch your navigation system wake up with Digital Yacht AIS products

AIT2000 Class B AIS Transponder

Digital Deep Sea CLA1000 Class A AIS Transponder

Navigation Sensors

DualNav

WindSense

WindSense from Digital Yacht is a new wireless wind system designed to allow iPads, tablets, SmartPhones and PCs to display accurate apparent wind speed and direction. It features a high quality, precision mast head sensor with 20m cable that connects to a below decks interface unit creating a wireless and NMEA 0183 wired connection. Existing NMEA compatible sensors can also be connected to the NMEA input to allow the wireless network to share other available on board instrument data. It's compatible with a wide range of apps for iOS and android. The built in wifi will typically footprint a GRP boat up to 30m.

Next generation navigation with precision positioning from the GPS150 DualNav GPS-GLONASS sensor

Positioning is a navigation fundamental and the GPS150 DualNav™ positioning sensor combines a super accurate 50 channel GPS with GLONASS, the Russian funded satellite positioning system that is now on line and providing an excellent back up or alternative to GPS. This "smart" sensor will automatically switch between the systems or the user can manually select the most appropriate for their activity. In DualNav mode, a sophisticated algorithm combines GPS and GLONASS data to offer sub 1m accuracy.

Digital Yacht's GPS150 utilises the industry standard NMEA data format allowing older chart plotters as well as current generation products to take advantage of this new technology. The GPS150 also allows the user to select a variety of different NMEA baud rates (4800, 38400 and 115200) to allow interfacing with legacy and current systems. It also supports a new TurboNav™ mode which will appeal to racing yachtsmen and performance users where GPS/GLONASS data is output at 10Hz (10 x faster update than normal) and with an interface speed of 115200 baud which is 24 x the speed of normal NMEA data. This massively improves slow speed navigation data as well as providing the best course and speed data in a dynamic situation.

The GPS150 can also connect to the WLN10 wireless interface to allow data to be sent to mobile devices such as iPhones, iPads and Tablets. There is also a USB version for PC and MAC users (ZDIGGPS150USB)

"Integrate the GPS150 with your chart plotter or your tablet/iPad via the WLN10HS NMEA-WiFi server"

WindSense

"Highly accurate wind sensor with WiFi interface for iPads, Smartphones, PCs and tablets and NMEA output for traditional instrument displays"

Wireless Navigation

Integrate smart devices like iPads and tablets into your boat's navigation system with Digital Yacht

We're all familiar with dedicated electronic chart plotters for navigation afloat. Since the introduction of GPS about 25 years ago, dedicated marine plotters have become the back bone of modern electronic navigation systems. But whilst smaller 4" and 5" plotters have tumbled in price, larger 8"-15" devices remain stubbornly expensive. The cost of the electronic cartography can also be high and you'll often be hooked into a closed or proprietary "eco" system for accessories, upgrades or extra features.

Consumer devices like the iPad do offer an alternative and with iPad sales now over 300 million units to date, they bring an economy of scale but also, importantly, a network of software developers making niche apps – many of which can be useful for marine utilisation.

The core iPad hardware revolves around a high resolution 7.9", 9.7" or 12.9" touch screen display. With screen resolutions now at 2732 x 2048 pixels for the latest iPad Pro, it outpaces dedicated products by a mile yet costs a lot less. They also feature wireless interfaces to allow integration with other on board devices and systems and with internet connectivity, they can bring a host of "cloud" data to your boat – from the latest weather reports to charts updates or crowd sourced data.

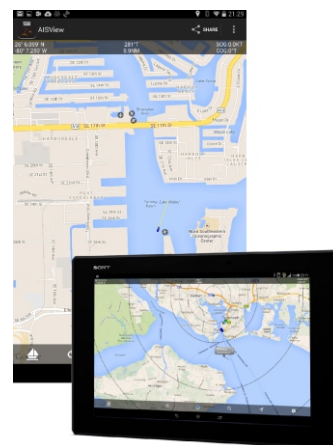

Whilst an iPad isn't waterproof, there's a variety of protective cases now available and of course 12v chargers, adaptors and mounting options.

At Digital Yacht, we firmly believe there's a place for consumer devices integrated into a boat's system and we have a wide range of wireless hardware and applications that make this a reality. We're determined to offer better value in boating and electronic navigation, safety, communication and entertainment afloat and the iPad revolution is a big step forward here. Our wireless servers are also compatible with Android and PC systems so you can utilise them with the latest slates from Microsoft too. Welcome to next generation navigation from Digital Yacht.

"Choose the NavLink iOS app for realtime navigation with detailed charts, AIS overlays and compatability with Digital Yacht wireless NMEA servers"

"AISView for Android brings live AIS from your boat's system to an Android tablet or phone. Compatible with any Digital Yacht NMEA to WiFi server"

"PilotLink portable NMEA to wireless server for Class A AIS systems - plug 'n play navigation for pilots and commercial users"

Wireless Internet Afloat

High power, long range WiFi for your boat offers speedy and affordable internet access afloat

More and more boaters want access to the internet afloat. Marinas and ports as well as a large number of cafes, hotels, restaurants and service providers offer wi-fi connectivity but you may just miss that vital connection if you're moored or anchored away from the dock – especially if you're below decks about to enjoy a movie or catch up on email. The WL70 can offer connections up to about 1/2 mile/1km depending upon conditions.

It has a very high performance 1.25m 15dBm antenna to suck in the weakest of signals and the internal low noise, high sensitivity modem connects to the PC via simple plug 'n play USB interface. It fits a standard 1" mount (not supplied) so can be permanently mounted or even taken out into the cockpit when moored and temporarily installed.

The more sophisticated WL510 is a two part hi power wifi access system comprising high gain external antenna and below deck modem and amplifier.

With the range offered by the WL510 (up to 7NM depending upon conditions), you're not limited to local access points either and many users take advantage of free wifi from cafes, bars and other sites even when a few miles offshore.

Most importantly, it utilises a network connection so can connect direct to the iNavConnect and iNavHub routers so the connection can be shared by PCs, tablets, iPads and other devices like smart TVs

Available Now - New iKConnect router

iKConnect is a new super-compact wifi router for use with all our wifi systems including the USB WL70. It's DC powered and easy to fit and will also work with our new iKommunicate gateway.

Part Number	Description	SRP US\$
WiFi Internet Access Products		
ZDIGWL60	WL60 MK3 WiFi ACCESS SYSTEM (USB)	149.95

ZDIGIKC	iK CONNECT ROUTER	249.95
ZDIGINC	iNAVConnect WIFI ROUTER	249.95
ZDIGINH	iNAVHub NMEA SERVER AND WIFI ROUTER	499.95

"The combination of the WL510 plus iNavHub allows the wifi connection to be shared by multiple users on PCs, iPads and tablets by creating a local boat wifi network. NMEA data can also be connected so the same network can be used for navigation and internet"

"With the WL70 you can utilise windows connection sharing on your laptop or PC which will act as a wifi router allowing other mobile users with iPads and tablets to share the connection"

Optional iKConnect WiFi Router For WL70

WL510 Hi Power WiFi Access System (Up to 7NM)

WL510 & iNavConnect Router Typical System

iNavConnect Router With Fusion app & audio compatibility

Marine PCs & Applications

Utilise a PC for navigation, communication and entertainment - smart solutions from Digital Yacht

Thinking about adding a PC to your boat? Digital Yacht's new Aqua Compact Pro PC really does fit in the palm of your hand! Space is always at a premium on board and despite its slimline 11.5 x 11 x 5 cm dimensions, the Aqua PC packs in a powerful 5th generation Intel Core i3 processor with exceptional graphics performance for the latest 3D charting and HD navigation programs. It's the perfect partner for applications like Maxsea TimeZero – even with radar and 3D overlays.

So why a PC on board? The number one, compelling reason to add a PC to your boat's navigation and communication system is amazing value. There's no doubt that a dedicated chart plotter is ideal for use at the helm where it needs to be waterproof and compact. But below decks, a PC can offer big screen performance at a very attractive price compared to a dedicated large screen multi-function display. Of course, a PC and chart plotting software can also be your only electronic navigation device, just integrated to the GPS and instruments via a simple NMEA interface.

A PC also offers more powerful functionality than a dedicated MFD with the ability to install software for lots of applications from navigation to entertainment, email communications, weather and internet connectivity. PCs are also up-dateable as new applications become available.

Any why not a laptop? They are simply not designed for the hostile marine environment and consume large amounts of power. It's a much neater solution to have a dedicated PC and dedicated display both in terms of functionality and reliability. However, if you're chartering a boat, a laptop may be the answer and our SmarterTrack Express Pack with software and an advanced DualNav plug 'n play positioning sensor makes portable navigation easy.

Typical PC System Integration

"The Aqua Compact Pro utilises the latest 6th generation Intel i3 processor for super fast charting redraws of 3D mapping. The Pro+ delivers Intel i7 processing power in the same sized package for super demanding bathymetric and 3D bottom imaging software"

"SmarterTrack navigation software utilises Navionics' charting so you can share charts on PC and chart plotter"

Safety - SARTs and AIS LifeGuard

AIS SART and AIS LifeGuard - the AIS man over board alarm for use with popular AIS PLBs

Digital Yacht has launched a potentially life-saving product called AIS LifeGuard. Each crew member needs to be carrying a personal AIS device – like the ones made by companies such as Ocean Signal, Easy, Kannad and McMurdo. Just connect the AIS LifeGuard to an on board AIS transponder or AIS receiver and you have a fully operational AIS SART man overboard system. The AIS Life Guard detects both message 1 and message 14 (these are reserved for AIS SART messaging). As soon as an AIS SART transmission is detected the AIS Life Guard will sound an internal 95db alarm and also display a red warning light. So within seconds the helmsman will be aware if a member of the crew or passenger has fallen overboard.

The AIS Life Guard is compatible with all Digital Yacht receivers and transponders and the new generation of AIS SARTS that have recently been approved for global use by the IMO.

The S1000 is an approved IMO AIS SART, suitable for vessel and liferaft deployment. It forms a vital part of mandated on board safety equipment for commercial users and leisure offshore boaters.

"AIS LifeGuard connects to your on board AIS system via a simple NMEA connection and alerts you when an AIS MOB SART signal is detected"

Part Number	Description	SRP US\$
On Board Entertainment and TV Antenna Solutions		
ZDIGDTV100	DTV100 HD TV MARINE ANTENNA SYSTEM	199.95
ZDIGDTVDA	DTV100 OPTIONAL DUAL OUT TV AMPLIFIER	69.95
Safety Products		
ZDIGS1000	DIGITAL DEP SEA S1000 SMART AIS SART	695.00

On Board Entertainment with the DTV100

TV not included

The new DTV100 HD TV antenna from Digital Yacht allows you to access the latest generation of digital "over the air" TV services on board. With a super sensitive design and hi gain amplifier, it sucks in even the weakest of signals. It's omni-directional too so there's no complicated aligning plus it will provide a feed for a FM stereo radio.

TV on board is a new "must have" especially with a big choice of free to air channels for all elements of entertainment, news, weather and sport. This low cost antenna opens a new market for reliable marina and anchorage reception without the expense of stabilised satellite based systems.

- Very high performance omni directional marine TV antenna with global reception capability of latest DVB/HDTV signals
- TV and FM radio outlet on below deck mounted amplifier with -7dB to +29dB gain
- Pole or standard 1" adaptor mounting ability
- Just 280mm diameter - supplied with 10m/33ft coax
- Optional dual TV outlet amplifier

iK iKommunicate

NMEA to Signal K Gateway & Server

- Next generation on board interfacing with this NMEA to Signal K gateway
- Easily connect your existing electronics to the new standard for the Internet of Things afloat
- Integrate with tablets and PCs via a simple wifi router connection
- Compatible with 100's apps for navigation, instrument displays, charting and social boating
- Host and build your own apps with built in web server

SRP \$299.95

iKommunicate The Kickstarter funded success story that is enabling the Internet of Things Afloat.

iKommunicate from Digital Yacht is a radical new gateway designed to get NMEA 0183 and NMEA 2000 based marine electronic systems connected to the next generation of interfacing and the Internet of Things. It was developed via a successful Kickstarter crowd funded project back in early 2016 and is now available as a consumer product.

NMEA interfacing has been utilised for many years and is now the defacto interconnect standard for all major brands of electronics. It's super reliable but old fashioned in today's world plus it's complex for application developers to work with - like a dial up modem in a broadband age. There are also legal issues with regard to certification and documentation which stalls innovative product development. The next generation of marine interfacing will integrate more items like engines, switches, sensors and even other marine assets like buoys and marinas so a new standard is required.

Since 2012, a group of talented, boat owning developers have been actively creating a new open source interfacing protocol called Signal K. The new iKommunicate gateway from Digital Yacht acts as a gateway from traditional NMEA based systems to the new Signal K platform allowing existing boat electronics to integrate with the next generation of connectivity.

Signal K is an HTML5 "web ready" JSON based data format, that makes web and mobile app development really simple - even for amateurs. Apps can be written in minutes and data viewed in a browser. For instance, NMEA 2000 engine data such as fuel flow, temperature and pressure could be logged and then analysed for any trends indicating an engine service requirement. Internet integration is also easy with all sorts of social media possibilities using Twitter and Facebook for logging and tracking. iKommunicate can also act as a simple on board webserver so PDF manuals can be stored and viewed as required. Files can be stored on the integrated SD card reader.

iKommunicate features 3 NMEA 0183 interfaces and 1 NMEA 2000 interface so there's plenty of connectivity. It has a built in webserver and ethernet port for easy connection to a wifi router so data can be shared with devices like tablets, Kindles, PCs and smart phones. NMEA data is also made available on the ethernet port. There are already many apps that are compatible including NMEA Remote, iNavX, Active Captain, and Navionics (for sonar charts). Find out more at www.ikommunicate.com

- The World's first NMEA to Signal K Gateway
- 12/24v DC Powered
- NMEA2000 Certified Gateway with Integral NMEA2000 drop cable
- Three Opto Isolated NMEA0183 Inputs and two Differential NMEA0183 Outputs
- Supports Signal K Version 1 HTTP REST API and Delta Messages via Web sockets
- Comes pre-installed with two Signal K Web Apps iKompass and Instrument Panel
- Document storage server - great for on board PDF manuals
- Internal 8GB micro SD Card for hosting Web Pages and Apps
- Also provides wireless NMEA over TCP and UDP protocols
- Network Discovery via Bonjour (mDNS) and Windows SDDP
- 1 x RJ45 Ethernet (10/100Mb) network connection
- Easy setup with built-in Web Interface
- Easy to install black box solution

THE interface for ANY marine electronics system
